Drupal 9

docker-compose.yml

```
version: '3.1'

services:

  drupal:
    image: drupal:9-apache
    ports:
      - 8096:80
    volumes:
      - '${PWD}/html/modules:/var/www/html/modules'
      - '${PWD}/html/profiles:/var/www/html/profiles'
      - '${PWD}/html/themes:/var/www/html/themes'
      # this takes advantage of the feature in Docker that a new anonymous
      # volume (which is what we're creating here) will be initialized with
the
      # existing content of the image at the same location
      - /var/www/html/sites
    restart: always

  db:
    image: mysql:5.7
    volumes:
      - '${PWD}/db_data:/var/lib/mysql'
    environment:
      MYSQL_ROOT_PASSWORD: guifi
      MYSQL_DATABASE: net9
      MYSQL_USER: net9
      MYSQL_PASSWORD: development
    ports:
      - "3306:3306"
    restart: always
```

Configuramos docker-dupal:

```
docker exec -ti docker-drupal_drupal_1 bash
```

Instalar composer

```
php -r "copy('https://getcomposer.org/installer', 'composer-setup.php');"
```

```
php -r "if (hash_file('sha384', 'composer-setup.php') ===  
'55ce33d7678c5a611085589f1f3ddf8b3c52d662cd01d4ba75c0ee0459970c2200a51f492d5  
57530c71c15d8dba01eae') { echo 'Installer verified'; } else { echo  
'Installer corrupt'; unlink('composer-setup.php'); } echo PHP_EOL;"  
php composer-setup.php  
php -r "unlink('composer-setup.php');"  
  
mv composer.phar /usr/local/bin/composer
```

Instalar DRUSH

```
composer require drush/drush
```

Preparar entorno:

```
cd /var/www/html  
sudo mkdir net9ldev  
chown www-data:www-data net9ldev  
composer create-project drupal/recommended-project:^9 net9ldev
```

Install drupal

```
cd /var/www/html/net9ldev/web/sites/default  
cp default.settings.php settings.php  
chmod a+rw settings.php  
mkdir files  
chmod a+rw files  
mkdir files/styles  
chmod a+rw files/styles
```

Le damos permisos a todo como www-data (tarda un poquillo):

```
chown -R www-data:www-data /var/www/html/*
```

Reiniciar apache

```
drush si standard --db-url=mysql://net9:development@172.17.0.1:3306/net9  
  
drush site-install standard -y --site-name="Drupal Guifi" --account-  
name=admin --account-pass=admin --db-  
url=mysql://net9:development@172.17.0.1/net9 -vvvv
```

```
sed -i 's/"stable"/"dev"/g' composer.json
```

```
drush pm:enable action_tracker inline_form_errors layout_builder  
layout_builder media media_library statistics telephone config_translation  
content_translation basic_auth jsonapi rest serialization
```

```
drush language-add ast  
drush language-add eu
```

```
drush language-add ca
drush language-add fr
drush language-add gl
drush language-add de
drush language-add el
drush language-add it
drush language-add pt-pt
drush language-add es
```

```
