

# Post de un fichero

En la web de validación de catcert subimos un certificado para validarlo:

```
http://testvalidacio.catcert.cat
```

Exportamos nuestro certificado a un fichero certificado.txt. La petición es:

```
curl -F "certFile=@certificado.txt;application/octet-stream"  
http://testvalidacio.catcert.cat/psiswebclient/verifyCert.do
```

Sacamos el nombre de la variable de **Content-Disposition** y el tipo de fichero de **Content-Type**:

```
Content-Disposition: form-data; name="certFile"; filename="certificado.txt"  
Content-Type: application/octet-stream
```

Toda la petición con live http-headers es:

```
http://testvalidacio.catcert.cat/psiswebclient/verifyCert.do  
  
POST /psiswebclient/verifyCert.do HTTP/1.1
