Instalamos servidor en RAID:

http://matarosensefils.net/wiki/index.php?n=Proxmox.DebianJessieNetinstall

En resumen, en cada disco creo 3 particiones:

```
32 Gb / y RAID
4 Gb swap
Lo que sobre para glusterfs
```

Y hacemos RAID en / con opción boot

Configuración de RED

Hacemos un bonding y encima un bridge con las dos tarjetas.

```
/etc/network/interfaces
```

```
auto lo
iface lo inet loopback
iface eth0 inet manual
iface eth1 inet manual
auto bond0
iface bond0 inet manual
    slaves eth0 eth1
   bond-mode 802.3ad
   bond-miimon 100
auto vmbr0
iface vmbr0 inet static
        address 192.168.2.1
        netmask 255.255.252.0
        gateway 192.168.1.1
        bridge_ports bond0
        bridge stp off
        bridge fd 0
```

En el switch tenemos que activar port trunk. En mi caso es un tplink tl sg 1024de y entro a la configuración en 192.168.0.1

Group Setting Group Thur	9091D 1962 T	Part Part 4 Part 5 Part 7 Date 0

	Thunk 3 Thunk 4 Thunk 5 Thunk 6 Thunk 7 Thunk 8	Trunk 1 Trunk 4 Trunk 5 Trunk 6 Trunk 7 Trunk 8	Turk 3 Turk 4 Turk 5 Turk 6 Turk 7 Turk 8	Turk 2 Turk 4 Turk 5 Turk 7 Turk 7		

Configurado red containers

/etc/pve/lxc/101.conf

net0: name=eth0,bridge=vmbr0,gw=192.168.0.1,hwaddr=6A:7F:40:EE:21:43,ip=192.168.0. 101/24,type=veth net1: name=eth1,bridge=vmbr1,gw=10.91.168.1,hwaddr=4A:72:61:FF:FF:59,ip=10.91.168. 101/24,type=veth

Instalación Proxmox

Fuente: http://pve.proxmox.com/wiki/Install_Proxmox_VE_on_Debian_Jessie#Adapt_your_sources.list

Asegurarse que el valor que resuelva hostname lo tenga en el /etc/hosts. Por ejemplo:

127.0.0.1 localhost
192.168.1.100 proxmoxescorxador

Añadimos repositorios de proxmox:

echo "deb http://download.proxmox.com/debian jessie pvetest" >
/etc/apt/sources.list.d/pve-install-repo.list

wget -0- "http://download.proxmox.com/debian/key.asc" | apt-key add -

apt-get update && apt-get dist-upgrade

apt-get install proxmox-ve ntp ssh postfix ksm-control-daemon open-iscsi

Vemos que cambia el kernel al reiniciar:

Linux proxmox02 3.16.0-4-amd64 #1 SMP Debian 3.16.7-ckt11-1+deb8u3 (2015-08-04) x86_64 GNU/Linux Linux proxmox02 4.1.3-1-pve #1 SMP Thu Jul 30 08:54:37 CEST 2015 x86_64 GNU/Linux Configuramos la red así:

```
auto vmbr0
iface vmbr0 inet static
   address 192.168.1.100
   netmask 255.255.255.0
   gateway 192.168.1.1
   bridge_ports eth0
   bridge_stp off
   bridge fd 0
```

Cluster Proxmox

Desde el primer nodo que será master

```
root@proxmox1:~# pvecm create clusterproxmox
Corosync Cluster Engine Authentication key generator.
Gathering 1024 bits for key from /dev/urandom.
Writing corosync key to /etc/corosync/authkey.
```

root@proxmox1:~# pvecm status Quorum information Date: Mon Sep 12 22:37:19 2016 Quorum provider: corosync_votequorum Nodes: 1 Node ID: 0x00000001 Ring ID: 1/4 Quorate: Yes

Votequorum information

Expected votes:	1
Highest expected:	1
Total votes:	1
Quorum:	1
Flags:	Quorate

Membership information

Nodeid	Votes	Name	
0×00000001	1	192.168.2.1	(local)

Desde el segundo nodo lo añadimos poniendo la ip del primero

```
root@proxmox2:~# pvecm add 192.168.2.1
The authenticity of host '192.168.2.1 (192.168.2.1)' can't be established.
ECDSA key fingerprint is 3a:17:aa:ca:c4:1b:55:2a:12:bb:fe:b4:ed:af:le:af.
Are you sure you want to continue connecting (yes/no)? yes
```

Legido Wiki - http://wiki.legido.com/

```
root@192.168.2.1's password:
copy corosync auth key
stopping pve-cluster service
backup old database
waiting for quorum...OK
generating node certificates
merge known_hosts file
restart services
successfully added node 'proxmox2' to cluster.
```

Ahora vemos que ya hay dos miembros:

root@proxmox1:~# pvecm status Quorum information Date: Mon Sep 12 22:47:44 2016 Quorum provider: corosync_votequorum Nodes: 2 Node ID: 0x00000001 Ring ID: 1/12 Quorate: Yes Votequorum information Expected votes: 2 Highest expected: 2 Total votes: 2

Quorum: 2 Flags: Quorate

Membership information

Nodeid	Votes	Name	
0×00000001	1	192.168.2.1	(local)
0x00000002	1	192.168.2.2	

Borrar nodo cluster

Si al borrar un nodo da error, le decimos que espere (e=expected) solo un nodo:

```
root@proxmox01:/var/log# pvecm delnode proxmox02
cluster not ready - no quorum?
root@proxmox01:/var/log# pvecm e 1
root@proxmox01:/var/log# pvecm delnode proxmox02
```

Gluster:

https://www.howtoforge.com/high-availability-storage-with-glusterfs-3.2.x-on-debian-wheezy-automati c-file-replication-mirror-across-two-storage-servers

Instalamos versión 3.7 que es la estable:

http://download.gluster.org/pub/gluster/glusterfs/3.7/LATEST/Debian/jessie/

Instalamos:

```
wget -0 - http://download.gluster.org/pub/gluster/glusterfs/LATEST/rsa.pub |
apt-key add -
echo deb
http://download.gluster.org/pub/gluster/glusterfs/LATEST/Debian/jessie/apt
jessie main > /etc/apt/sources.list.d/gluster.list
apt-get update
apt-get install glusterfs-server
```

Queremos montar lo siguiente:

×

En el /etc/hosts añadimos los dos servidores:

```
root@proxmox1:~# cat /etc/hosts
127.0.0.1 localhost
192.168.2.1 proxmox1
```

192.168.2.2 proxmox2

Conectamos los dos servidores. Desde el server1:

root@proxmox1:~# gluster peer probe proxmox2

Vemos que están conectados:

root@proxmox1:~# gluster peer status
Number of Peers: 1

```
Hostname: proxmox2
Uuid: 62eecf86-2e71-4487-ac5b-9b5f16dc0382
State: Peer in Cluster (Connected)
```

Y desde el server2 igual

root@proxmox2:~# gluster peer status
Number of Peers: 1

```
Hostname: proxmox1
Uuid: 061807e7-75a6-4636-adde-e9fef4cfa3ec
State: Peer in Cluster (Connected)
```

Creamos las particiones y formateamos en xfs

Montamos las particiones en /gluster/brick1 y /gluster/brick2

blkid

```
/dev/sda3: UUID="6afd599f-ea83-4c19-bc71-8ebfce42a332" TYPE="xfs"
/dev/sdb3: UUID="bd39fa7a-6b23-4b43-89e0-693b61ba4581" TYPE="xfs"
```

Fichero /etc/fstab

```
#brick 1
UUID="6afd599f-ea83-4c19-bc71-8ebfce42a332" /glusterfs/brick1 xfs
rw,inode64,noatime,nouuid 0 1
```

```
#brick 2
UUID="bd39fa7a-6b23-4b43-89e0-693b61ba4581" /glusterfs/brick2 xfs
rw,inode64,noatime,nouuid 0 1
```

Creamos el volúmen. Mejor un volumen grande que dos pequeños:

```
gluster volume create volumen_gluster replica 2 transport tcp
proxmox1:/bricks/disc1/brick1 proxmox2:/bricks/disc1/brick1
proxmox1:/bricks/disc2/brick2 proxmox2:/bricks/disc2/brick2
```

volume create: volumen_gluster: success: please start the volume to access data

Lo iniciamos:

```
root@proxmox1:~# gluster volume start volumen_gluster
volume start: volumen_gluster1: success
```

Miramos el estado:

# gluster volume status Status of volume: volumen_gluster Gluster process	TCP Port	RDMA Port	Online Pi	.d
				-
Brick proxmox1:/bricks/disc1/brick1 8938	49152	Θ	Y	
Brick proxmox2:/bricks/disc1/brick1 7721	49154	Θ	Y	

2023/11/01 22:55	7/9			Configuración de RED
Brick proxmox1:/bricks/disc2	/brick2	49153	0	Y
Brick proxmox2:/bricks/disc2 7740	/brick2	49155	0	Y
Self-heal Daemon on localhos	st	N/A	N/A	Υ
Self-heal Daemon on proxmox2 7760	2	N/A	N/A	Y
Task Status of Volume volume	en_gluster			
 There are no active volume t	asks			

Conectar como cliente

#mount -t glusterfs proxmox1:/volumen_gluster /glusterfs

/etc/fstab

proxmox1:/volumen_gluster /glusterfs glusterfs defaults,_netdev 0 2

Almacenamiento compartido Proxmox

De momento los containers no soportan GlusterFS directamente desde proxmox, las VMs si.

Montamos /glusterfs y lo ponemos como almacenamiento de Containers (y también de VMs):

Server View Datacenter Datacenter Search Summary Options Storage Backup Users Gi Add Pernov Edit Directory Content Path/Target LVM LVM LVM LVM LVM Disk image, ISO in /var/lib/vz SFS Add: Directory Containers Nodes: All (No restrictions) Finable: Containers Disk image Shared: Share	PROX	l Environme	ent 4.2-18	/158720b9	Sear	ch					
Search Summary Options Storage Backup Users Gr Add Permove Edit Directory Content Path/Target LVM LVM-Thin NFS GlusterFS RBD ZFS over ISCSI ZFS Directory: /glusterfs/containers Directory: /glusterfs/containers Disk image Disk image Shared:	Server View	~	Data	acenter

		Container									

NFS

Montamos el recurso por nfs en el servidor de proxmox. En los containers los montamos por bind:

En la carpeta /etc/pve/lxc editamos los ficheros *.conf

Nota: No poner / delante de container/folder

```
lxc.mount.entry: /host/folder container/folder none
bind,create=dir,optional 0 0
```

Fuente: https://pve.proxmox.com/wiki/LXC_Bind_Mounts Ejemplo:

×

<pre>lxc.mount.entry:</pre>	/mnt/pelis mnt/pelis	none bind,create=dir,optional 0 0
<pre>lxc.mount.entry:</pre>	<pre>/mnt/series mnt/series</pre>	s none bind,create=dir,optional 0 0
